Spring Eye Bolt Tightening Torque

(AL 2 suspensions with 70mm wide springs)

BPW has changed the diameter of the spring eye bolt.

The new bolt is 24 mm in diameter and has a reduced torque to that of the previous bolt.

M24 spring eye bolts (36mm hex) are to be tightened to **650 Nm**

Spring eye bolts and related parts that are replaced in service must be of the same dimensions as those removed.

All existing **M30** spring eye bolts (46mm hex) continue to be tightened to **990 Nm**
